

WebQ My Courses - Development Roadmap

Goal: Complete a working project by Friday while understanding the important concepts for the technical interview.

Tonight (1:00 AM - 1:30 AM)

- Install Python dependencies.
- Create the Django project.
- Run the Django development server.
- Understand the purpose of manage.py, settings.py, urls.py, wsgi.py and asgi.py.
- Prepare tomorrow's checklist.
- Sleep by 1:30 AM.

Tomorrow Morning (Before Class)

- Verify the Django project still runs.
- Fix any setup issues.
- Review yesterday's work.

During Class (Only if Free)

- Read explanations from Anti Gravity.
- Review interview notes.
- Plan database models.
- Avoid debugging or major coding.

Tomorrow Evening (5 PM - 11 PM)

- Create the lms app.
- Configure settings.py.
- Configure DRF, JWT and CORS.
- Design and create database models.
- Run makemigrations and migrate.
- Create seed data.
- Verify everything using Django Admin.

Day 2

- Configure JWT authentication.
- Build My Courses API.
- Build Course Detail API.
- Build Toggle Completion API.
- Test APIs using Postman or Thunder Client.
- Implement permissions and IDOR protection.

Day 3

- Create React + Vite frontend.
- Configure Tailwind CSS.
- Configure React Router, Axios and React Query.
- Build Login page.
- Build Dashboard page.

Day 4

- Build Course Details page.
- Implement Mark as Complete.
- Add Search feature.
- Handle loading, empty and error states.
- Make the UI responsive.
- Deploy backend (Render) and frontend (Vercel).

Friday

- Complete end-to-end testing.
- Fix bugs.
- Write README.md.
- Write APPROACH.md.
- Clean GitHub repository.
- Verify live URLs.
- Submit GitHub repository, live URL, README.md and APPROACH.md.

Rules Until Submission

- Don't spend more than 15 minutes stuck on one problem.
- Follow the cycle: Plan → Build → Run → Test → Understand → Continue.
- Understand the architecture and key concepts first; deep-dive after submission.
